HOROSCOPE PRINTS BASED ON THE WORK BY JOHN FLAMSTEED, LE CANCER

Reproductions of the J. Fortin edition of 1776.

John Flamsteed was born into a prosperous family but did not attend University due to poor health. Self taught, his extensive studies in astronomy resulted in his being appointed the first Astronomer Royal by King Charles II, with the Royal Observatory at Greenwich being built for him to continue his observations of the heavens. Flamsteed was the first astronomer to sight Uranus in 1690, naming it 34 Tauri, as he believed it to be a star. His Celestial Atlas was published ten years posthumously by his wife. It set the standard in professional astronomy for almost a century, with the positions of over 3,000 stars given more accurately than ever before.

DIMENSIONS: 27cm (10^{3/4}") High, 32cm (12^{1/2}") Wide, 1.5cm (0^{1/2}") Deep

PRICE: £180 each

STOCK CODE: P01364 Cancer

HISTORY

Presented in dark wood frames.
