THE EARED GREBE.—*Podiceps auritus*.

THE birds of the family of *Colymbidae*, or Divers, are so formed as to be remarkably well fitted for the water, on which they chiefly dwell. On land they are heavy and inactive, shuffling along like seals; but on its own element the Grebe looks quite a different creature, alert and vigorous, and chasing the fish for food with the swiftness of an arrow. The above cut represents a male Eared Grebe in full plumage, and a young bird of the same species. The reader's attention is called to the foot of the large bird. The toes differ from those of every other kind of water-bird. They are not webbed like the duck's or those of other swimming birds; but the toes are separate and flattened, each toe being in itself a well-formed oar. The legs are placed far back in the body, giving the creature a great advantage in swimming, but causing its awkward gait when on land. The head of the Eared Grebe is narrow, the back long and sharp, the neck long, the body boat-shaped. The crest on its head, and the ruff round its neck, give it a strange, but pretty appearance. When diving for its prey, its short wings add much to its speed, which is amazing. The food of this singular bird consists of fishes and water-insects; but it has been observed, that in the stomach of the cow is often found a ball of hair, which the animal has taken into its mouth whilst licking its coat, and swallowed, but not digested. The Grebes lay their nests among the reeds and herbage of marshes. The nest is made of half-decayed reeds, and other dead vegetable matter; it is large and strong, though roughly built, and is so put together that it may rise or fall with the rise or fall of the water on which it floats. The female lays three or four eggs, which she carefully covers up every time she ventures to leave the nest. These interesting birds are found in every quarter of the globe. The Eared Grebe is a rare bird in our island.

PUBLISHED UNDER THE SUPERVISION OF THE COMMITTEE OF GENERAL LITERATURE AND EDUCATION, APPOINTED BY THE SOCIETY FOR PROMOTING CHRISTIAN KNOWLEDGE.  
SOLD AT THE BOOKSHOPS: 71, GREAT QUEEN STREET, LINCOLN'S INN FIELDS; 4, ROYAL EXCHANGE; 45, FLEET STREET; AND BY ALL BOOKSELLERS.  
PRICE 2s. 6d. PER COPY. 1840.

## NATURAL HISTORY, ORIGINAL HAND-COLOURED WOOD ENGRAVINGS PUBLISHED C1850

Published by the Society for Promoting Christian Knowledge, framed in dark wood

The Society for Promoting Christian Knowledge (SPCK) is the third oldest publishing house in England, after the Oxford and Cambridge University Presses. It was founded in 1698 by an Anglican priest, Thomas Bray who believed passionately in the power of the printed word. In its first two hundred years, the Society founded many charity schools for poor students in the 7 to 11 age group. It is from these schools that the modern concept of primary and secondary education has grown. Although the SPCK originally dealt with just Christian subjects, from the 1830s onwards it was publishing general educational topics as well. SPCK's early publications were distributed through a network of supporters who received books and tracts to sell or give away in their own localities. Large quantities of Christian literature were provided for the Navy, and the Society actively encouraged the formation of parish libraries and was also an early provider of teacher training.
